WRITNG TASK 2

You should spend about 40 minutes on this task.

Write about the following topic:

Soon people who cannot work with computers will be disadvantaged. To what extent do you agree or disagree with idea?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

You should write at least 250 words.

SAMPLE 01.

Over the past decades, computing technology has been going through an unbelievable development. Today possessing desktop or portable computers which are frequently used to surf the Internet or just to work is the norm of the society. Thus, I agree with the statement that people who cannot work with them will be disadvantaged. This argument will be proven by considering how computer science has changed our everyday life and why it is required for our work.

Firstly, information technology and the advent of the Internet have made sweeping changes in people’s life. For instance, we spend a fair amount of time in front of the computer not just for entertainment purposes, but also for managing bank accounts, buying household items and keeping contact with the extended family and friends. Hence, it can be seen that having a personal computer provide us many new opportunities as well as making our life easier. From this point of view, it is clear that non-computer users will experience a huge drawback sooner or later.

In addition, almost every job requires the proper use of these machines. For example, as a secretary, one needs to be familiar with office equipments such as multifunction printers, copiers, fax-machines and certainly with many popular software products such as Word, Excel. As a result, it is acknowledged that the mentioned skills are needed in a number of circumstances. In other words, the disadvantages that non-users are facing in the labour market are clear.

In conclusion, the degree that information technology has changed our life and working environment is significant. Therefore, it has been proven that people who are not catching up with the development will be disadvantaged. Thus, trying to get familiar with computers is recommended.
SAMPLE 02.

Computers are the backbone of today’s world and will remain for the foreseeable future. People who have the knowledge of this gadget are believed to have some advantages over the others. It is a debatable topic which I am going to discuss both aspect of this topic.

In present world, life without a computer seems next to impossible. Mostly, persons who can operate this electronic device can get employment easily. It seems to be true when a person apply for job, always there is a column explicitly asking for computer knowledge. It is claimed that computer does the work fast and with no difficulty, since people can do calculation and access database very quickly by using ms-office tool. Moreover, there is a very less chance of error in work done with computers.

Many people also think that our dependency on computers is increasing day by day which can be dangerous if the problems like again come. They also said that it is not necessary that a person with skills of computers is always beneficiary and we cannot judge a person capability on the basis of it. Many humans without the information about computer are still getting the jobs in 21st century.

In conclusion, the computers are used in almost every field. The competition for getting employment is growing very fast. To get a job, a person should have special traits in this world. In my opinion, computer knowledge is essential for everyone. Without it, it is tough to survive in future.
